

# ONLINE JOB PORTAL

## PROJECT ID: 04

**Project Aim :** To design and implement an online job portal wherein people can seek jobs according to their interests ,locality and qualification and employers can provide jobs to these job seekers, also the employers can themselves find for a candidate based on their resume.

### Research Done :

**I have gone through all popular online job portal website like**

- 1.Naukri.com
- 2.shine.com
- 3.MonsterIndia
- 4.TimesJob
- 5SimplyHired
- 6.JobsDb

**I found a similarity in UI Part which I am listing below:**

- 1.Navigation bar at the top with all accessible link and login and signup option
- 2.A search Bar just below the nav bar where user can search job of his respective field and his preferred location
- 3.Just beside the search bar at the right side a tab to register and place resume to be seen by recruiter
- 4.At the left side of the search bar a div section where user can filter job on condition like job field , preferred location etc.

**5. In the main section we will have jobs provided by recruiter stating required tech stacks , required job experience and job location**

**6.At footer section we will have all the link , social media icons and again a small tab which prompt user to register.**

**7.Just above the footer we will have a marque tag having the names of all companies**

## Types of Users

### Owner/Admin:

1. Can add or remove new clients
2. Can add or remove new applicants
3. Can see the no of applicants and clients

He basically is whole and sole of the app and has all the power of operation

### Recruiters

1. Can register and login
2. Can add a new job posting
3. Edit a Job Post
4. Send Mail to selected Candidates
5. Can see the profile of applied candidates

### Applicants

1. Can register and login
2. Upload Resume
3. Search and apply for Jobs

## Tree Diagram and Flowchart to explain Functionality
